

# The Healthier Home.

## Allergy Free

In addition to steel being one of the safest materials used to build a home, it's also very healthy. Steel framing is not vulnerable to fungi or organism growth, including mould.

Most household allergies are aggravated by mould that grows on building products. Steel will help protect you and your family from the health risks associated with toxic mould.

## Non-Toxic and Chemical Free

Steel framing is recommended by The Healthy House Institute for chemically sensitive and environmentally conscious home owners who seek good indoor air quality. Steel frames do not need to be treated for termites and are free of resin adhesives and chemicals normally present in other construction materials.

As a metal, steel does not emit volatile organic compounds (VOC's) into the indoor air.

## Environmentally Friendly

Steel is 100% recyclable. Genesis pre-manufactured framing systems eliminate scrap & waste. Substantially reducing on-site landfill and preserving our vital natural resources.
