

# Framework for a Safer Home.

## Fire Resistant

Steel is 100% non-combustible and therefore will not contribute to the spread of a fire.

## Vermin Proof

No risk of structural damage caused by Termite or Carpenter Ant Infestation

## Withstands Extreme Environmental & Climatic Conditions

Structural light steel framing is engineered to commercial building standards which far exceed residential code minimums.

**Snow:** Genesis roofs will support 30% higher snow loads.

**Wind:** Less probability of wind damage. Specifically designed to withstand high wind and uplift forces - forces not addressed by Residential Codes.

**Earthquakes:** Less probability of damage in an earthquake. Lighter structure with stronger connections results in less seismic force.

**Lightning:** Steel-framed homes do not attract lightning any more than wood framed homes. In fact, because it readily conducts electricity to the ground, a steel-framed home is less likely to be damaged by lightning than a wood framed house.

***Because a steel framed home is so resistant to natural forces, some homeowners may save as much as 30% on insurance premiums.***
